

# UTILITY TRAILER

ProStar's utility trailers have the same quality and attention to detail that goes into all ProStar trailers. Quality lighting, tires, primer and paint finishes, protected wiring, reinforced A frame tongues and all required markings.

ProStars gate ramp locks are very simple to use. A slot and tab design that is locked in place with flip pin. The hinges are machined with close tolerances and fitted with a zinc fitting. This design prevents rattling and ensures a durable lifetime of use for the gate.

ProStars utility trailers come in widths of 61" and 76. Decks with pressure treated 2x8 wood.

The tongue on the utility trailer is made of 3 channel and is reinforced with a crossmember through center of A-frame tongue. Wiring is in loom and all wiring connectors are silicon filled caps.

## Features

- \* DOT approved lighting
